It is our pleasure to invite you to a Webinar of the POLIMP project on "Financing Renewable Energy in Europe towards 2030", which will take place on 20 April 2016, from 9 to 10 am CEST.

AGENDA

Implementing the Paris Agreement will require substantial additional investments in renewable energy sources around the world and also in the European Union. This POLIMP Webinar will look into the consequences of the new global climate deal for financing renewable energy in Europe. In the context of the revision of the EU Renewable Energy Directive (RED), the webinar will also discuss how to overcome existing barriers to financing RES deployment, how to reduce investment and policy risks, and how to mobilise investments for renewable energies in Europe. As a background to the Webinar, the POLIMP Policy Brief on: "Financing Renewable Energy for Europe: The way forward" is available at: www.polimp.eu/publications/policy-brief-series/item/2nd

Chair:

- **Arno Behrens**, Head of Energy & Research Fellow, CEPS

Speakers:

- **Vlasis Oikonomou**, JIN Climate and Sustainability
- **Andreas Türk**, Joanneum Research
- **Martin Berg**, Investment Officer, Climate & Environment, EIB
- **Kristian Ruby**, Chief Policy Officer, Wind Europe

Background:

This webinar is organised by the EU-FP7 funded project “POLIMP” on mobilising and transferring knowledge on post-2012 climate policy implications. POLIMP aims to identify knowledge gaps about future international climate policy directions and what these gaps imply for policy and decision makers internationally and in the EU.

POLIMP identified what information about climate policy making and its implications is needed by the different stakeholder groups, collected this information from various different sources and offers the results to stakeholders in intuitively easy formats and clear language.

One of the key outputs of POLIMP is an online platform called “Climate Policy Info Hub” (climatepolicyinfohub.eu), which offers scientific evidence on climate policy options. It explores impacts and implications of international and EU climate policy for decision-makers in policy, business and civil society. The aim is to support informed science-based EU climate policy-making.

We look forward to interesting discussions,

Kind regards,

Monica Alessi
